EEG, Prague 4/2009

## EFFECTIVENESS OF CZECH SUPPORT SCHEME FOR RES-E PROJECTS

## Doc. Ing. Jaroslav Knápek, CSc.

## **Czech Technical University in Prague** Fac. of Electrical Engineering

Carolinum April 16th, 2009

Doc. Ing. Jaroslav Knápek, CSc.

page 1

EEG, Prague 4/2009

## **POWER GENERATION FROM RES**

## **STRUCTURE OF POWER GENERATION - 2**

#### EEG, Prague 4/2009

## **POWER GENERATION FROM BIOMASS**

Power generation in 2007: 968 GWh, co-firing and pulp extracts utilization

## SYSTEM SOLUTION FOR RES-PROJECTS

Since 2006: new legislation – Act on RES-E support No. 180/2005

- Feed-in tariffs and green bonuses system for RES-E projects
- System solution for RES-E project
- No solution for RES project for heat generation (deleted from Act proposal)

Doc. Ing. Jaroslav Knápek, CSc.

page 5

Module – General Legal and Economical Frameworks in the Czech Republic

EEG, Prague 4/2009

## LOGIC OF SCHEME – ACT 180/2005

- Risk minimization for the investors (intention to minimize cost of green power, to simplify support scheme, to motivate inv.)
- Support is paid by power consumers prop. to consump. via separate distribution / transm. fee

– 2006: 28,26 / 2008: 40,75 / 2009: 52,18 CZK/MWh

• Key role of ERU

## **MAIN PRINCIPLES OF ACT 180/2005**

- Feed-in tariffs, green bonuses paid by distribution / transmission company
- Obligatory power purchase (F.T.)
- Differentiation by RES type, time matrix
- F.T. assured during at least 15 years, G.B. should reflect higher risk (20, 30 years)
- Annual updating of F.T. by inflation (PPI)

Doc. Ing. Jaroslav Knápek, CSc.

page 7

Module – General Legal and Economical Frameworks in the Czech Republic

EEG, Prague 4/2009

## F.T. AND G.B. VALUES

## Defined for next year by corresponding Price decision of ERU (8/2008 for 2009)

• Logic of time matrix

#### i type of RES

## MAIN PRINCIPLES OF ACT 180/2005 - 2

- Reduction of F.T. for next year only for new sources -5% at max.
- F.T. and G.B. are annually announced by ERU (Price decision 8/2008 for 2009)
- Co-firing supported only by green bonuses
- Economic preference of intentionally grown biomass

Doc. Ing. Jaroslav Knápek, CSc.

page 9

Module – General Legal and Economical Frameworks in the Czech Republic

#### EEG, Prague 4/2009

## MAIN PRINCIPLES OF ACT 180/2005 - 3

- ERU is responsible for creation of economic motivation to meet 2010 indicative target
  - No specific methodology for F.T. and G.B. calculation mentioned in the Act
- Differentiation of biomass types for support by MoE notice 482/2005 Sb.
- G.B. also for power generated for "own" consumption of producer

## LOOK INWARD OF METHODOLOGY

Act 180/2005 does not define specific methodology for F.T. and G.B. calculation

- They have to create "motivation"
- Basic explanation in ERU notice 364/2007
  - Rate of return approach applied
    - F.T. should assure the same rate of return
  - Reference project for each RES type
  - CF analysis during the whole lifetime

Doc. Ing. Jaroslav Knápek, CSc.

page 11

Module – General Legal and Economical Frameworks in the Czech Republic

### EEG, Prague 4/2009

## LOOK INWARD OF METHODOLOGY - 2

## Rate of return approach

 Calculation of minimum price c<sub>min</sub> for each RES type (i.e. reference project)

$$NPV = \sum_{t=1}^{T_{\xi}} CF_t \cdot (1+r_n)^{-t} = 0$$
  
$$\sum_{t=1}^{T_{\xi}} [c_{\min t} \cdot Q_t + DOT_t] \cdot (1+r_n)^{-t} = \sum_{t=1}^{T_{\xi}} V_t \cdot (1+r_n)^{-t}$$

• T<sub>z</sub> .. lifetime, r<sub>n</sub> .. nom. discount, Q .. quantity produced, V .. expenses, Dot .. oper. subsidy

## **LOOK INWARD OF METHODOLOGY - 3**

## Rate of return on capital invested

- NPV=0 means that rate of return on capital invested equals to discount rate
- Discount rate has meaning of WACC

$$WACC = r_{ed} * \frac{E}{E+D} + i * (1-d) * \frac{D}{E+D}$$

E ...equity, D .. debt capital, i .. interest rate, d .. rax rate

Doc. Ing. Jaroslav Knápek, CSc.

#### EEG, Prague 4/2009

# **DEVELOP. OF LICENSED RES PLANTS**

## **INVESTORS INTEREST ON RES-E PROJ.**

# PV and wind power projects are in centre of investors interests at the moment

- Support seems to be attractive
- Stable investors conditions
- "Easiest projects"

Doc. Ing. Jaroslav Knápek, CSc.

page 15

### EEG, Prague 4/2009

Beg. of 2009: Total installed capacity app. 150 MW Outlook to 2013: up to 1600 MW (considered proj.)

## WIND PROJECTS - 2

page 17

Development of installed power in wind appl.

#### Start of F.T. system since 2006 is obvious

Doc. Ing. Jaroslav Knápek, CSc.

### EEG, Prague 4/2009

## **PV PROJECTS**

- No limit for total installed capacity
- Big projects under investors' interest
  - E.g. PV plant Dubnany (9/2008), 2,1 MW
  - Majority of projects under preparation
  - End. of 2007:app. 3,4 MW
    - Boom of PV in 2008-9

## **PV PROJECTS - 2**

 Highest interest of investors in Southern Moravia

- Annual solar radiation MJ/m2

Doc. Ing. Jaroslav Knápek, CSc.

#### EEG, Prague 4/2009

## **PV PROJECTS - 3**

Development of installed power in PV appl.

# Start of F.T. system since 2006 and favourable economic conditions are obvious

## SMALL HYDRO

- SH < 1 MW app. 132 MW
- SH from 1 to 10 MW app. 152 MW
- Power generation in 2007: 1012 GWh
- Long tradition in SH construction
- Reconstruction in 90's and beg. of this decade (support from Czech Energy Ag.)
   – Limited possibilities for new SH plants

page 21

Doc. Ing. Jaroslav Knápek, CSc.

EEG, Prague 4/2009

## SMALL HYDRO - 2

Development of installed power in SH < 1 MW

Reconstruction can increase power generation

## LANDFILL AND SEWAGE GAS

- Fast development at the beginning of support
- Landfill gas plants (2007)
  57 locations, 21,7 MW, 98 GWh
- Sewage gas plants (2007) – 109 locations, 17,3 MW, 74 GWh
- Majority of suitable locations used

Doc. Ing. Jaroslav Knápek, CSc.

page 23

#### EEG, Prague 4/2009

## LANDFILL GAS - 2

#### Development of installed power in landfill gas appl.

## **BIOGAS APPLICATIONS**

- Supported as the tool for diversification of activities in agriculture
  - Supported within Rural development plan
    - Up to 470 GWh of power generation assumed
    - App. 1 bil. CZK of inv. support already assigned
  - Can help to reduce dependency to agr. market
  - Can help to solve problem with grass from permanent grass lands

page 25

Doc. Ing. Jaroslav Knápek, CSc.

EEG, Prague 4/2009

## **BIOGAS AND SEWAGE GAS APPL.**

Doc. Ing. Jaroslav Knápek, CSc.

## **BIOMASS APPLICATIONS FOR POWER**

- Biomass differentiation
  - 1. Planted, 2. residual biomass from agriculture and forestry, 3. wooden chips and wooden residuals from wood processing industry
  - Co-firing (biomass/coal mixture) originally assumed as the major contribution in period to 2010
    - But significantly limited by shortage of suitable biomass and absence of long term contracts

Doc. Ing. Jaroslav Knápek, CSc.

page 27

EEG, Prague 4/2009

## **PLAYERS ON RES-E MARKET**

- Big investors and power producers
  - Interest in this field started since 2006
  - Interest focused on prepared projects
  - ČEZ, a.s. has "big" plans for RES-E, but ....
- SME and private investors
  - Long preparation of projects (esp. wind)
  - Good knowledge of conditions in given location
- Financial investors

## F.T. AND G.B. VALUES - 3

## Values for 2009

#### F.T. and G. B. [CZK/MWh] for 2009

	F.T.	G.B.	
Wind	2340	1630	
S. hydro	2700	1260	
Biogas AF1	4120	2580	
Biogas AF2	3550	2010	
Landfill gas	2420	880	
Sewage gas	2420	880	
Biomass 100%	4490/3460/2570	2950/1920/1030	
Co-firing	-	1350/690/40	
Paralel co-firing	-	1620/960/310	
PV over 30 kW	12790	11810	
Geothermal	4500	3140	
Gas from mines	2420	880	

#### Biomass types 1/2/3

intentionally planted biomass
 forestry residuals
 and agricultural waste
 other types of biomass
 (wood chips, etc.)

Doc. Ing. Jaroslav Knápek, CSc.

## EEG, Prague 4/2009 SUPPORT SCHEME IS BASICALLY CONSISTENT

- Sufficient economic motivation exists
- Other barriers block faster RES-E projects development

page 29

- No system support for heat based on RES
- CZ support scheme does not include tools to prefer some RES types
  - no roofs for RES-E projects of given type

EEG, Prague 4/2009

# OTHER IMPERFETIONS OF SUPPORT SCHEME

## WACC approach

- Big power companies has better access to capital (lower interest rate – higher rate of return on equity)
- Possible problems of small investors with negative CF during bank repayment
- G.B. for co-firing can distort biomass market price

Doc. Ing. Jaroslav Knápek, CSc.

page 31

Module – General Legal and Economical Frameworks in the Czech Republic

## EEG, Prague 4/2009

## **NEWS FOR 2009**

- Update of technical and economic parameters for reference projects
- Plans for RES support for high effective cogeneration
- Green bonuses need assumptions on market values for 2010 power
